

Building the foundations of AI.

Starlight.ai is building an AI-ready data-centre and digital infrastructure business around development, ownership and operations.

Illustrative architecture. Not an existing operating facility.

A long-term business perspective

Our development approach connects site assessment, power, engineering, commercial planning and aligned capital. The aim is a substantiated investment case that considers how infrastructure is delivered and operated throughout its life.

A clear model. A disciplined approach.

Development

Connect site and utility assessment, design requirements, approvals and commercial feasibility.

Ownership and operations

Bring a long-term asset perspective into development decisions, including maintainability, resource use and future expansion.

Strategic partnerships

Engage capital partners, development partners and specialists in power, engineering, connectivity and delivery.

Founder & CEO

Bobby Randhawa is an entrepreneur and business builder focused on bringing people, partnerships and commercial direction together. His focus at Starlight is company direction, strategic relationships and the alignment of development, ownership and operations.
